

## Application Report

### Holland PT14 Bypasses Ground Water from a 20" Supply Well

#### PROJECT APPLICATION

Rowe Drilling Company went to work for JEA of Jacksonville (electric, water, and wastewater authority) to build the new West Nassau Water Treatment Plant. Superintendent John Disk called on Holland Pump to provide a bypass solution.

iA Holland PT14 was set up to bypass ground water from a 20" water supply well. The real solution was to tap into the drilling casing from the suction side of the pump.

The Rowe crew handled all of the water the well was producing by discharging into a field away from the drilling rig. They avoided flooding the work area completely and finished the job with success.
