4", 8" & 14" HYDRAULIC SUBMERSIBLE PUMP

APPLICATION

Southern Development Corporation was charged with the task of constructing a building pad in Alta Lakes, Florida. The problem, for General Manager Jackie Smith, was that the site for the pad was located right over a 20-acre lake.

To solve the problem, Holland Pump delivered 8" and 14" Hydraulic Submersible Pumps.

The lake ground water was maintained with a 4" Hydraulic Submersible Pump until the lake was backfilled. The 4" Hydraulic Pump remained on site for the construction of the new retention pond.
