### EQUIPMENT: E8-H8TP 8" HYDRAULIC SUBMERSIBLE PUMP

#### APPLICATION

For over 25 years, perceptive contractors have recognized Holland Pump as the premier choice for a ruggedly designed and dependable portable hydraulic submersible pump. Engineered to pump continuously 24 hours a day, seven days a week under harsh conditions, Holland Hydraulic Submersible Pumps are ideal for high volume, low head applications such as lake dewatering, gravel pits, quarries, control boxes, and various open ditch applications. The power unit is designed to be placed in high locations up to 200 feet away from the pump head. Protect liability and the environment simultaneously by choosing a Holland Hydraulic Submersible Pump that operates with 100% biodegradable vegetable oil.

#### JOB DESCRIPTION

In Miami, Florida, **Facchina McGaughan** set the tone of this dual high rise site, Quantum on the Bay, for success with the help of three Holland 8" Electric Submersible Pumps. Once removed from the foundation, the water was pumped into two 18,000 gallon sediment tanks where the water was separated from any sediment. Facchina McGaughan wanted to be sure that the ground water was clean before removing it from the site in order to comply with EPA restrictions.
