

EQUIPMENT: PT14TP 14" SUCTION LIFT PUMP

APPLICATION

Rowe Drilling Company went to work for JEA of Jacksonville (electric, water, and wastewater authority) to build the new West Nassau Water Treatment Plant. Superintendent John Disk called on Holland Pump to provide a bypass solution.

The Holland PT14 was set up to bypass ground water from a 20" water supply well. The real solution was to tap into the drill casing from the suction side of the pump.

The Rowe crew managed all the water the well was producing by discharging into a field away from the drilling rig. They avoided flooding the work area completely and finished the job with success.
